Transformers Dark of the Moon (TV series) (English) fansub view Contact us, Send an e-mail, COPYRIGHT INFRINGEMENT AFAIK, I'm not using copyrighted materials. Not that I'm trying to plagiarise/copyright, I'm sure that if I did I would be in a lot of trouble. I'm only following what's been done by people that have released the game before me, so I don't know what copyrighted material has been used. At least the engine is homemade and I'm not trying to copy/plagiarise anything. I'm sure that I would be in a lot of trouble if I did that. All I did is took sprites from Battlefleet Gothic, added 'name' properties, and made it modifiable. It's my own work, and no one is forcing me to use that code, so it doesn't infringe any one's copyright. I'm using the code/resources to give people a free game, and giving permission for it's use. I'm sure that anyone who cares can work out what's been used and licensed. Think of it as making a code/resources package. All that you would need to do is include that in your work, give a credits for the work, licence, and include a 'download/use' link. I've got my own licence that I've posted on a forum somewhere. "How much damage? The perfect read is We the People, Obama's book of proposals for how to fix our problems." POTUS' spokesman said, not exactly, that "the President enjoyed a book event."Q: Get random permutation of array without using any built-in functions in python I have an array called Rank = ['1','2','3','4','5','6','7','8','9','10','11','12','13','14',' f678ea9f9e
